

A. JOHN HARVEY, ASGCA
RBA - Associate
Golf Course Architect
The RBA Group

*American Society of
Golf Course Architects
Member #183*

EDUCATION

BLA, Landscape Architecture,
with High Honors,
Michigan State University, 1988
Gloucester College of Art and Technology
Gloucester, England, 1987
Warsaw College of Design,
Warsaw, Poland, 1987
Lansing Community College,
Lansing, Michigan, 1982-1985

MEMBERSHIPS / ASSOCIATIONS

Member of American Society of Golf Course
Architects – Environmental Committee
Member of The American Society of Landscape
Architects
Member of The United States Golf Association
Member of Golf Course Superintendent's
Association of America
Member New Jersey Turf Association

EXPERIENCE

Prior to joining forces with The RBA Group, in September of 2002 as golf course architect, A. John Harvey, ASGCA was Senior Golf Course Design Associate of the Roger Rulewich Group, LLC where he served 7 years with the course design and construction firm. He also worked with Robert Trent Jones, Sr., and Roger G. Rulewich for 8 years as Design Associate as part of the Robert Trent Jones Companies who offered its clients both design and construction. It was with Jones' firm where he got his start in the profession of course architecture. This experience also allowed him to work closely with the Mr. Jones' construction arm of the company, Florida Golf Corporation.

During his senior year of college, he studied at Gloucester College of Art and Technology in Gloucester, England and Warsaw College of

Design in Warsaw Poland. This experience exposed him to the golf courses and their landscapes throughout his travels in England, Ireland, Scotland, Wales and much of Europe.

Upon completion of his course work at MSU, he accepted a position as an entry-level golf course designer to Mr. Jones and Mr. Rulewich at their offices in Montclair, New Jersey. John soon became involved with a busy workload of projects both stateside and abroad. Under these talented and prolific golf course architects, he assisted in the preparation of layouts, plans, specifications and proposals for numerous new design and remodeling projects. This included hands-on involvement with courses during the design and construction process and on-site supervision of all work through completion.

Many of the projects he has worked on required extensive planning on environmentally sensitive sites and John has developed the skills necessary to shepherd design projects through the complex and sometimes lengthy permit and approval process. He has successfully demonstrated the need and negotiated environmental impacts necessary for the construction of projects with Local, State and Federal Agencies. This process often involves a complete route plan alternative analysis to reduce site impacts to the maximum extent practicable while still developing quality golf.

He understands the need to balance site conditions with sound golf design principles and the importance of assembling a qualified, well-disciplined team to coordinate the complex planning and approval process for timely construction. His projects have involved designing courses on a number of physically challenging sites including sand and gravel mines, pits, rock quarries, intracoastal soil disposal sites, brownfields, properties containing historic Roman Roads and ancient woodlands, steep terrain, rock outcroppings, wetlands and on the banks of municipal drinking water reservoirs.

John is the author of several environmental case studies for successful golf course projects. He has served as a guest lecturer at Rutgers University for several turfgrass courses. He also

Continued

has presented at the American Society of Golf Course Architect's "Remodeling University – A Short Course to a Better Course." His projects have also appeared as feature stories in a number of golf course industry periodicals. John enjoys working on the design of new courses and developing master plans for course improvements on existing public and private golf courses. Field design and direction of feature shaping is where he excels as a "hands-on" designer with his attention to detail and project coordination with both client and construction team. The design of new courses and renovation of existing facilities is an important mix of both art and a science. This balance is well represented in his work ethic and embodied in his designs.

He feels that the foundation to a spectacular course starts with the routing plan, and the delicate remodeling or renovation of an existing course lends an appreciation to the original design intent and perceived shot values. While it is important to understand the clientele of the course facility, it is also necessary to consider the advances in golf equipment, increasing ball flight/distance and maintenance practices with respect to what impacts they have on the design during the planning process.

His work with two of the most revered names in golf course architecture Messer's, Jones and Rulewich has provided him the expertise to work on a myriad of projects. John continues to nurture longstanding client relationships and forge new ones with the goal of developing a host of valued clients and representative quality courses.
